Computer Science student building full-stack and ML products — shipped a YOLOv8 vision system and a survival-analysis risk model.

EDUCATION

George Mason University

Bachelor of Science in Computer Science

Fairfax, Virginia

Expected Graduation: May 2028

- **GPA: 3.7** | Dean's List (2024–Present)
- Relevant Coursework: Data Structures, Object-Oriented Programming, Computer Systems & Programming, Formal Methods and Models, Discrete Mathematics, Linear Algebra, Calculus III.
- **Certifications:** Machine Learning Foundations, Cornell University (Aug 2025); Web Development, CodePath.org (Apr 2025).

SKILLS

- **Languages:** Python, Java, JavaScript, TypeScript, C, C++, HTML/CSS
- **Frameworks & Libraries:** React.js, Node.js, Tailwind CSS, Scikit-learn, Pandas, Jupyter
- **Tools:** Git, GitHub, MongoDB, REST APIs, VS Code, Google Colab, Figma, Canva, Slack

EXPERIENCE

George Mason University — OSCAR

Website Specialist

Fairfax, Virginia

Nov 2025 – Present

- Led the product lifecycle and information-architecture redesign of the OSCAR platform, optimizing navigation and accessibility for 25,000+ undergraduate students.
- Drove a 37% increase in attendance for the Celebration of Student Scholarship expo by defining requirements and launching a new, conversion-optimized landing page.

Verizon

AI Tech Fellow

Remote

May 2025 – Dec 2025

- Led a cross-functional team of 8 through a 15-week lifecycle to deliver “Project Falcon,” a YOLOv8-powered computer vision solution that replaced manual telecom infrastructure inspections.
- Translated compliance requirements from 4 senior stakeholders into technical features, designing a custom “Confidence Gating” algorithm that filtered low-quality inference and raised system reliability to 95%.
- Directed the architecture of a fault-tolerant data ingestion pipeline with local caching for 2,000+ images, bypassing external API rate limits and reducing latency by 40%.

Ultatel

Software Engineering Intern

Herndon, Virginia

May 2024 – Aug 2024

- Improved user engagement 17% by redesigning the site's visual style with a new color palette and updated UI components in HTML and CSS.
- Developed and launched 5+ new website features using JavaScript and TypeScript, increasing user retention by 25%.
- Reduced production deployment errors by 30% through diligent testing and adherence to Agile practices and version control.

PROJECTS

BookNook: Literary Analysis

Full-Stack Engineer

Remote

May 2025 – Present

- Built a full-stack personal library application using React, MongoDB, and Google Cloud to power context-aware text analysis, guided Socratic seminars, and Smart Recaps across 10,000+ books from the BookLib API.
- Designed a state-driven caching system to manage external API requests, eliminating redundant data calls and lowering operational costs.

Wildfire Evacuation Threat Predictor

ML Engineer

Remote

Dec 2024 – May 2025

- Designed and launched a predictive web application (Python, Streamlit) to help emergency managers and first responders triage wildfire risk and prioritize community evacuations.
- Engineered forecasting models using Random Survival Forests and Gradient Boosting Survival Analysis to predict evacuation threats across 12–72 hour horizons.
- Trained and validated models on real-world WatchDuty data, optimizing for both comparative urgency (C-index) and exact probability calibration (Brier Score).

ACTIVITIES AND LEADERSHIP

George Mason — InternConnect

Web Developer & Digital Marketing Intern

Fairfax, Virginia

Feb 2025 – Jul 2025

- Developed and maintained a user-friendly website, increasing student engagement by 35% and improving career-resource accessibility.
- Managed the digital presence and optimized UI/UX and social media strategy, driving 80% growth in online interactions.
